Description

Author: Jochen Clasen.

Regulating the Risk of Unemployment offers a systematic comparative analysis of the recent adaptation of European unemployment protection systems to increasingly post-industrial labor markets. These systems were mainly designed and institutionalized in predominantly industrial economies, characterized by relatively standardized employment relationships and stable career patterns, as well as plentiful employment opportunities even for those with low skills. Over the past two to three decades they have faced the challenge of an accelerating shift to a primarily service-based economy, accompanied by demands for greater flexibility in wages and terms and conditions in low-skill segments of the labor market as well as pressures to maximise labor force participation given the more limited potential for productivity-led growth. The book develops an original framework for analyzing adaptive reform in unemployment protection along three discrete dimensions of institutional change, which are termed benefit homogenization, risk re-categorization, and activation. This framework is then used to structure analysis of twenty years of unemployment protection reform in twelve European countries. In addition to mapping reforms along these dimensions, the country studies analyze the political and institutional factors that have shaped national patterns of adaptation. Complementary comparative analyses explore the effects of benefit reforms on the operation of the labor market, assess evolving patterns of working-age benefit dependency, and examine the changing role of active labor market policies in the regulation of the risk of
unemployment.
The regulation of temporary work has become more permissive in Europe, particularly in countries that have made the regulation of temporary work more permissive. This has led to a segmentation of labour markets between secure and insecure jobs. What makes such segmentation and labour market risk particularly stressful is that many European countries have made the regulation of temporary work more permissive in recent years.

The World Employment Conference takes “Labour market dynamics in the post-industrial economy” as its theme. It focuses on the need to develop more inclusive labour markets and the EU posting of workers. Adaptation by closing skills gaps and placing unemployed youth in work, and regulation are required to deal with issues that go beyond national or regional borders. Vertical and horizontal coordination of European policies to improve labour market reintegration of national experiences in the European policy agenda is crucial. Clasen, J./Clegg, D. (Eds.) (2011): Regulating the Risk of Unemployment. National Adapations to Post Industrial Labour Markets in Europe, Houndmills/Basingstoke.
